***Water, Water Everywhere* video:**

This video explores some of the important characteristics of water, and describes properties of saltwater and freshwater environments. The water cycle is explored in detail. Live-action footage from throughout the world illustrates a wide diversity of water environments. Terminology includes: water cycle, evaporation, condensation, precipitation, oceans, lakes, river, saltwater, freshwater and groundwater.

The program titled *Water, Water Everywhere* correlates to the Sunshine State Standards for elementary science as follows:

**Science Grades - 5**

**Processes that Shape the Earth**

Standard 2: The student recognizes that processes in the lithosphere, atmosphere, hydrosphere, and biosphere interact to shape the Earth. (SC.D.1.2)

- Knows that 75 percent of the surface of the Earth is covered by water.
- Knows that the water cycle is influenced by temperature, pressure, and the topography of the land.

**How Living Things Interact with Their Environment**

Standard 1: The student understands the competitive, interdependent, cyclic nature of living things in the environment. (SC.G.1.2)

- Knows that green plants use carbon dioxide, water, and sunlight energy to turn minerals and nutrients into food for growth, maintenance, and reproduction.
- Knows that variations in light, water, temperature, and soil content are largely responsible for the existence of different kinds of organisms and population densities in an ecosystem.
